Avoiding material damage to the camera

NOTICE
Malfunctions and short circuits by damaged cables and connectors
Provide sufficient strain relief for all cable connections.

Power supply voltage for I/O cables

If you are using I/O cables, voltage drops may result, causing the following issues:

- The camera cannot be operated.
- The camera does not respond to trigger pulses.
- The output signal to control devices connected to the camera is not recognized.

To provide a proper power supply voltage, adjust the DC input voltage at the open ends of the cable as shown in Table 1.

NOTICE
Damage to camera electronics
The following values apply to the Allied Vision I/O cables shown.
If you are using your own cables, ensure the power supply voltage at the camera connector side is 4.5 to 5.5 VDC.

Product code	Product description	Length	Power supply voltage
12322	I/O cable 7-pin JST with screw locks, 3 m	3 m ±100 mm	4.5 to 5.5 VDC
17070	I/O cable 7-pin JST with screw locks, 5 m	5 m ±100 mm	5 to 5.5 VDC
[1]At the open ends of the cable
